

Dear Hiring Team,
at ING Group

I'm writing to express my strong interest in the Backend Engineer position. With a solid foundation in backend engineering and a recently completed Master's degree in Information Technology from Universitas Gadjah Mada, I'm eager to contribute my technical expertise to your engineering team.

Prior to taking a career break to focus on my Master's studies, I worked as a Backend Engineer at PT BFI Finance Indonesia Tbk. In this role, I contributed to the development of a core loan system that was successfully deployed to over 200 branches nationwide. My primary focus was on building adaptable system templates and modular workflows for six different loan products, ensuring the system could handle diverse risk profiles and dynamic approval rules. This experience sharpened my skills in maintaining robust enterprise applications.

My decision to step back from the industry to pursue my Master's degree and explore advanced concepts in technology and system design. This journey led me to focus on Human-Centered Software Engineering, specifically through my thesis, *"Optimizing Business Process Efficiency Through BPMN Engine-Enabled Automation."* This research has equipped me with a strong foundation in business process optimization. I'm eager to leverage this background to deliver robust system solutions.

I have attached my resume for your review. I look forward to the opportunity to discuss how my skills align with your team's needs.

Sincerely,

M. Machrush Aliy Sirojjam Mushlich
